

COMPANY PROFILE / 2026

Grounded thinking. Practical delivery.

Engineering and project support that respects the drawing, the programme, and the people building it.

WHAT WE SUPPORT

Ground engineering • Gabions and erosion control • Geosynthetics
Technical procurement • Site inspections • Project coordination

Good engineering support starts by listening.

TerraVantage Solutions works alongside contractors, consultants, developers and infrastructure teams to turn technical requirements into practical next steps.

OUR POINT OF VIEW

Behind every drawing is a person responsible for budget, programme, quality and safety. We keep that reality in view - and make the technical conversation easier to act on.

WHAT THAT FEELS LIKE

- **Clear**
You know what we need and what comes next.
- **Practical**
Advice reflects site, supply, and programme realities.
- **Accountable**
Scope, decisions, and actions are documented.

WHERE WE ADD VALUE

Support suited to complex, site-led project environments.

Civil infrastructure

Water and stormwater

Mining and industrial

Commercial development

Our role is not to add another layer of complexity.

It is to help the project team make a sound decision, understand the implications, and move forward with clarity.

From ground behaviour to buildable solutions.

Focused technical support for the systems that retain, reinforce, filter, drain and protect.

Engineering advisory

Early-stage technical input and practical option assessment.

01

TYPICAL DELIVERABLES

- Concept and option assessment
- Constructability review
- Technical notes

Gabions and erosion control

Application support for retaining, channel and protection works.

02

TYPICAL DELIVERABLES

- System and product selection
- Material schedules and quantities
- Installation guidance

Geosynthetic solutions

Support for reinforcement, separation, filtration, drainage, and protection.

03

TYPICAL DELIVERABLES

- Application review
- Equivalent-product review
- Specification support

Support where projects become real.

Connecting technical intent with materials, site conditions and the people responsible for delivery.

Site inspections and reporting

Structured observations with clear, documented recommendations.

04

TYPICAL DELIVERABLES

- Photo inspection records
- Non-conformance observations
- Action-focused reports

Technical procurement support

Aligning specifications, proposed materials, and supply.

05

TYPICAL DELIVERABLES

- BoQs and schedules
- Supplier coordination
- Compliance comparisons

Project coordination

Coordinating technical communication through delivery.

06

TYPICAL DELIVERABLES

- Action tracking
- Design and site coordination
- Close-out documentation

No black box. Just a clear way forward.

A simple, documented process keeps expectations aligned from the first conversation to close-out.

01

Listen

We review the brief, available information, site constraints, programme, and the outcome you need.

02

Clarify

We identify information gaps, agree on the scope, and make responsibilities visible.

03

Solve

We develop a practical response that considers technical performance, constructability, and supply.

04

Support

We provide the agreed documentation, coordination, site input, and close-out records.

BRING US IN EARLY

The best starting point is a short conversation supported by:

- ☐ Project location
- ☐ Drawings / sketches
- ☐ Application and constraints
- ☐ Programme
- ☐ Support required

START A CONVERSATION

Let's talk about the site, not just the specification.

Send us the project location, application, available drawings and the support you need. We will respond with the next practical step.
